Thomas Schneider, Dipl.Ing.FH
CIO MESPAS AG

For us at MESPAS every element of your information is respected as a part of your business-critical resources. The security and protection of your fleet data is our primary responsibility.

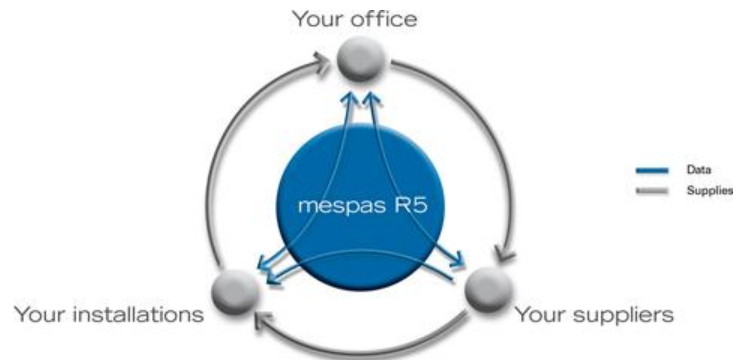

mespas R5 Fleet Management Software

System and Data Security

SECURITY FROM THE GROUND UP

The mespas R5 infrastructure is both robust and secure. Redundant routers, switches, server clusters and backup systems are used to **ensure reliability**.

MESPAS' privacy policy covers what information is gathered, how it is used, with whom it is shared as well as the customer's ability to **control the access to information**.

mespas R5 uses a highly compressed, **encrypted stream** to ensure data confidentiality without sacrificing performance. All traffic between mespas R5 servers and customer clients, including suppliers, is protected with end-to-end 128-bit Advanced Encryption Standard (AES) encryption.

MESPAS' recipe is straightforward: Start with a secure hosted service and operational practices that preserve customer privacy. Protect remote-access connections with multi-level authentication and state-of-the-art encryption to keep users' information safe. The end result: **MESPAS offers robust, secure fleet management that's fast, reliable and simple to use.**

Manage your fleet, not just your ships...

MESPAS is a Swiss-based software solution and service provider for managing technical installations such as marine fleets and industrial installations.

It was founded in 2000 by marine engineers, software engineers and venture capitalists.
